-----

Find the latest statistics and facts on energy storage.

In 2025, capacity growth from battery storage could set a record as operators report plans to add 19.6 GW of utility-scale battery storage to the grid, according to our ...

In order to triple renewable energy capacity by 2030 as required under COP28, the IEA said that around 1,500 GW of energy storage, of which 1 200 GW from batteries, will be ...

Rystad Energy modeling projects that annual battery storage installations will surpass 400 gigawatt-hours (GWh) by 2030, representing a ten-fold increase in current yearly ...

Batteries account for 90% of the increase in storage in the Net Zero Emissions by 2050 (NZE) Scenario, rising 14-fold to 1 200 GW by 2030. ...

Argonne National Laboratory projects that battery cell production in North America will exceed 1,200 GWh of capacity by 2030. That is enough to supply 12 to 15 million new EVs ...

Last year, a record 200 GWh of new BESS projects came online globally, bringing the world's total operational battery storage ...

Batteries account for 90% of the increase in storage in the Net Zero Emissions by 2050 (NZE) Scenario, rising 14-fold to 1 200 GW by 2030. This includes both utility-scale and behind-the ...

Argonne National Laboratory projects that battery cell production in North America will exceed 1,200 GWh of capacity by 2030. ...

The prediction is that energy storage installations will surpass 400 GWh a year in 2030, which would be 10 times more than current annual installation capacity.
