Why is solar power unviable in Southeast Asia?

Photovoltaic installations captured the entire Southeast Asia solar energy market in 2024, making concentrated solar power commercially unviable due to direct normal irradiance seldom exceeding 1,500 kWh per m²;

How has solar power capacity changed in Asia & Pacific?

The Renewable Energy Status Report (Asia and Pacific) shows that solar power capacity has more than tripled in the region in recent years. Figure 1: Installed Renewable Energy capacity in APAC. Source: Business Intelligence Rystad Energy. Figure 2: PV capacity and PV generation in Asia (exc. China) and Pacific between 1990-2025.

Will solar energy lead the growth of Asia?

Solar energy will lead this growth, whose regional capacity will nearly double from about 215 GW to 382 GW in the same period. Before the Covid-19 pandemic, energy transition was already on the rise in Asian countries.

Is Asia-Pacific a good place to invest in solar power?

The Asia-Pacific region is leading the charge in the global shift towards renewable energy, with solar power playing a pivotal role in this transformation. Boasting some of the largest and most innovative solar energy projects in the world, this region is setting benchmarks for sustainable energy development.

From a geographical layout perspective, Vietnam occupies a leading position in Southeast Asia's photovoltaic industry, with module capacity reaching 54.8GW, cell capacity at ...

Leaders of The Pack Rise of India Spotlight on Southeast Asia Southeast Asian Situation In order to give a more focused view on the Southeast Asian region - without the overshadowing effect of India and China - we compiled a ranking of the 10 largest Southeast Asian projects. Although the list provides a clearer picture of the region's largest solar farms, it emphasizes the Thai and the Philippine regional dominance. See more on solarplaza
