Telecom Power Systems in high-seismic zones must meet strict performance requirements to ensure continuous operation during and after an earthquake. These systems ...

Base stations rely on the urban power grid. To maintain service during outages: Uninterruptible Power Supply (UPS) systems ...

In this research, we focus on a comprehensive risk analysis for a gas power station located along the southern coastal region of Israel. The research aims to enhance the station's ...

In the past and recent earthquakes, components of high-voltage substations and power transmission systems have suffered ...

To secure backup power for telecom base stations, operators must adopt a multi-faceted approach that covers system design, ...

Optimal post-earthquake recover strategies were obtained through multi-level analysis. Electrical substations need a sufficient amount of time to repair damaged equipment ...

The key question is how to optimally reconfigure the distribution network to supply critical loads in post-earthquake conditions by DERs while ensuring that security constraints ...

One of the primary tasks for effective disaster relief after a catastrophic earthquake is robust communication. In this paper, we propose a simple logistic method based on two ...

A method to evaluate the post-earthquake functionality of communication base stations using Bayesian network is developed.

In the past and recent earthquakes, components of high-voltage substations and power transmission systems have suffered damage and this damage has led to disruption in ...
