How much wind power does Bulgaria have in 2024?

At the end of 2024, Bulgaria's cumulative installed wind power capacity reached 714 MW (0.71 GW), which represents 15.1 % of the total installed renewable energy capacity in the country. The report provides a complete picture of the market situation, dynamics, current issues and future prospects.

How much wind power does Bulgaria have?

By the end of 2023, Bulgaria's installed wind capacity reached 705 MW, accounting for 3.9% of the nation's annual gross electricity generation. Wind farms in Bulgaria generated 1,584 GWh in 2023, marking a 5.9% year-on-year increase. Official strategic documents indicate a target of increasing wind capacity by 249 MW by 2030.

Is Bulgaria paving the way for a resurgence in wind energy investment?

Bulgaria is paving the way for a resurgence in wind energy investment after years of stagnation, as detailed in a new study produced by business intelligence provider SeeNext, in collaboration with Gugushev & Partners Law Office.

What is potential wind power density (W/m²)?

asses (for comparison). Onshore wind: Potential wind power density (W/m²) is shown in the seven classes used by NREL, measured at a height of 100m. The bar chart shows the distribution of the country's land area in each of these classes compared to the global distrib

This study aims to shed light on the applicable potentials for wind power development in Bulgaria, Hungary and Romania, indicating and informing decision makers and stakeholders how wind ...

Wind power generated 2% of electricity in Bulgaria in 2023. By the end of 2020 almost 1 GW of onshore wind power had been installed. It has been estimated that...

At the end of 2024, Bulgaria's cumulative installed wind power capacity reached 714 MW (0.71 GW), which represents 15.1 % of the total installed renewable energy capacity in the country. ...

Based on expert interviews and desk research, the study discusses the main obstacles to the deployment of offshore wind energy and formulates recommendations for future policy actions.

Abstract This paper presents a detailed comparative analysis of the projected growth in wind power capacities in Bulgaria and ...

By the end of 2020 almost 1 GW of onshore wind power had been installed. [2] It has been estimated that there is potential for at least another 2 GW by 2030. [3]

Onshore wind: Potential wind power density (W/m²) is shown in the seven classes used by NREL, measured at a height of 100m. The bar chart shows the distribution of the country's land area ...

Abstract This paper presents a detailed comparative analysis of the projected growth in wind power capacities in Bulgaria and Kazakhstan from 2023 to 2030.

Wind power generated 2% of electricity in Bulgaria in 2023. By the end of 2020 almost 1 GW of onshore wind power had been installed. It has been estimated that there is potential for at least another 2 GW by 2030. The total wind power grid-connected capacity in Bulgaria was 702 MW as of 2023. An energy island in the Black Sea has been suggested for joint development with wind power in Romania

Data and information about Wind power plants and their location plotted on an interactive map of Bulgaria.
