Can you add battery storage to an existing solar system?

Yes, adding battery storage to an existing solar system is not only possible but increasingly common. Retrofitting a battery bank lets you store extra solar energy for nighttime use, reduce your dependence on the grid, and keep key appliances powered during an outage.

Can a solar inverter be used with a lithium battery?

Integrating a solar inverter with a lithium battery can take your renewable energy setup to the next level. This combination allows for better energy storage, improved efficiency, and greater resilience during power outages. LiFePO₄ batteries are particularly well-suited for solar applications because of their thermal stability and long cycle life.

Should you use a lithium-ion battery for a home inverter?

A lithium-ion battery for a home inverter can significantly enhance your home's energy storage capabilities. This translates to more reliable power during outages and better management of renewable energy resources like solar panels. Lithium-ion batteries require less maintenance and have a longer lifespan compared to traditional batteries.

How many lithium batteries can a hybrid inverter stack?

Stack up to 9 Lithium Batteries per system! Just give our office a call and ask about adding more power storage. Delivering 10,000W of rated power output, this rugged pure sine wave hybrid inverter is capable of pairing with either GEL or LI batteries. Dual MPPTs provide 99% efficiency. Provides 120V and 220V output power.

Our 20 and 40 foot shipping containers are outfitted with roof mounted solar power on the outside, and on the inside, a rugged inverter with power ready battery bank.
