Can Pilkington solar-ETM be used in single glazing applications?

Pilkington Solar-E(TM) products can be used in single glazing applications provided that the coating faces the interior of the building. They provide attractive solutions to various applications where good light transmittance with enhanced solar control performance is required.

How to transport solar panels?

Usually, to transport solar panels, a pallet is used. Here is how a good company packs it:

- o First panels go on the pallet bottoms up and the last one is placed front side up.
- o Corner protectors and foam pads across the frame are added.
- o Usually a piece of cardboard or plastic is placed in between every two panels.

How are solar panels shipped?

- o Panels are strapped near the corners, never in the middle.
- o The whole shipment is often covered in foil. Not everybody treats the package this good, but these safety measures should give you an idea of how a solar panel is supposed to be shipped.

How do you carry solar panels to a garage?

If you choose to carry panels in your hands to your garage, try not to apply too much pressure in one spot of a panel. It's best to distribute its weight across your shoulder, arm and back. The installation of solar panels is usually handled by professionals. Normally, they would use a mechanical lift to get your panels up on the roof.
