By recognising storage systems under EU funding mechanisms and grid planning processes, the EU can unlock their full potential, not only in stabilising energy supply and maximising ...

Record deployment numbers, driven by renewable integration needs and falling technology costs, are attracting major investments and ...

With the current import tariff to buy batteries into Europe at only 1.3% and most of the supply chain already developed in non-EU countries, the business case for made-in-EU ...

It uses a European electricity market model to quantify the impact of battery storage uptake on cross-border interconnector profitability, exploring wide-ranging scenarios for ...

With the current import tariff to buy batteries into Europe at only 1.3% and most of the supply chain already developed in non-EU ...

Record deployment numbers, driven by renewable integration needs and falling technology costs, are attracting major investments and reshaping energy strategies across the ...

Historically, home batteries have driven the European battery storage market, but 2025 will mark their drop to represent 33% of the market. As the effects of the energy crisis ...

Years of strong solar growth and high gas prices have increased electricity price volatility across the EU, strengthening opportunities for battery storage. In turn, batteries can ...

The decarbonisation of the energy mix and reductions in overall CO₂ emissions are other clear, positive outcomes of an increased use of Battery Energy Storage in Europe.

Our five-year outlook foresees significant BESS expansion in Europe - a sixfold increase to nearly 120 GWh by 2029, driving total capacity to 400 GWh, yet falls short of energy transition needs.

Effects of European imported energy storage batteries
