What is fiber optic splicing?

Knowledge of fiber optic splicing methods is vital to any company or fiber optic technician involved in Telecommunications or LAN and networking projects. Simply put, fiber optic splicing involves joining two fiber optic cables together. The other, more common, method of joining fibers is called termination or connectorization.

What is OFS Fox solution for alternative energy applications?

OFS brings unique solutions for fiber in the power network. OFS FOX Solution for Alternative Energy applications features several end-to-end solutions optimized to distribute fiber in the wind and solar farm for connection with the grid. Solutions for the wind and solar farm: See below for a typical application of our products in the control box:

Can fiber Power a solar farm?

Fiber is more than capable of supporting the small volume of data transfers at these "solar farms." A variety of devices are served by a solar installation's network. Inverters convert the DC power from the photovoltaic (PV) panels to the AC power required by the utility grid. Monitoring the inverters' health and performance is critical.

What is a fusion splice-on connector?

Fusion splice-on connectors (FSOC) or Mechanical splice-on connectors (MSOC) can be installed on-site in the field. The main advantage of a field installable connector is to eliminate slack management issues. Fusion Splice-on Connectors use a cleaver and fusion splicer to splice a connector to the fiber.

Any and all fiber optic applications to bring connectivity to all projects we work on. AMG Fiber Optic Technologies Inc offers solar farm fiberoptics and wind farms. Read more about our ...

Learn why utility-scale solar facilities are most commonly networked using fiber optic technology and how to best maintain it.

Learn how to splice fiber optic cables in wind turbines, what types of splices are available, and what safety precautions you need to take.

Our fiber solutions are designed to withstand high winds, extreme temperatures, and excessive moisture levels
