Why are the EU and France lurching towards lithium?

The EU's and France's lurch towards lithium is, of course, not just intended to support, and profit, from the energy transition but to buffer an overreliance - and a dominance of future industry - by China, which the US recently accused of "flooding" the market to drive out rivals.

Why is France upping lithium production?

After years of deindustrialisation, France is upping lithium production to support battery manufacturing and the green transition. Is lithium de France developing a geothermal project in Alsace?

Lithium de France, a subsidiary of French Arverne group, is also developing a lithium brine geothermal project in Alsace. The company has just concluded a prefeasibility study on surface elements of the project and is currently awaiting its first drilling permit to confirm the resource.

What is France's largest lithium project?

One of the country's largest lithium projects, EMILI, is being developed by French multinational Imerys. The project in Beauvoir, central France, where lithium was first detected in the 1960s, hopes to produce enough lithium per year, over 25 years, to power 700,000 EVs.

France's Environmental and Energy Management Agency (ADEME) has stated that plug-and-play solar panels should be ...

Failure to comply with this obligation to install charging stations is sanctioned by criminal and administrative penalties under the French Code de la construction et de l'habitation.

This article explores the implications of such a ban, safety concerns cited by regulators, and how France's stance diverges from ...

France's Environmental and Energy Management Agency (ADEME) has stated that plug-and-play solar panels should be encouraged as they offer a simple and effective way ...

This article explores the implications of such a ban, safety concerns cited by regulators, and how France's
