FERC today directed new reliability standards to protect the grid as the nation makes the transition to expanded use of clean energy technologies.

Collaborative efforts between industry and government partners are essential for creating effective rules and ordinances for siting and permitting battery energy storage systems as energy ...

System improvements, including grid stability and resilience, have been observed in ERCOT assessments with advanced grid support inverter-based ESRs.

But the integration of more inverter-based resources into the grid presents challenges to grid stability. The good news is that cutting-edge research into grid-forming ...

Coordination with UL, SAE, NEC-NFPA70, and CSA will be required to ensure safe and reliable implementation. This effort will need to address residential, commercial, and industrial ...

We are working with public and private partners to develop the concepts, tools, and technologies needed to measure, analyze, predict, protect, and control the grid of the future.

EVs could act as moveable or portable energy storage. Energy storage technology is a vital component of modernizing and decarbonizing the electrical grid. The future power grid will ...

Thirty-six grid-connected inverters from eight inverter manufacturers are installed on site, allowing Florida Power and Light to gain insight into the products' efficiency, grid support ...

New US regulations for grid-tied inverters are set to take effect in January 2026, impacting manufacturers, installers, and consumers by introducing enhanced safety, ...

Utilities, system operators, regulators, renewable energy developers, equipment manufacturers, and policymakers share a common goal: a reliable, resilient, and cost-effective grid.
