Are solar and energy storage prices about to rise?

Solar and storage prices are about to rise after a year and a half of record lows, according to new data from Wood Mackenzie. Equipment procurement costs for solar and energy storage will jump around 9% starting in Q4 2025, marking the end of the bargain pricing developers have enjoyed for the last 18 months.

Why are solar & energy storage costs rising in Q4 2025?

Equipment procurement costs for solar and energy storage will jump around 9% starting in Q4 2025, marking the end of the bargain pricing developers have enjoyed for the last 18 months. That's because China is changing the rules. Wood Mackenzie points to three major drivers behind the coming spike: Polysilicon consolidation.

How will China's policy change affect solar projects in Q4?

That policy shift means developers worldwide will face higher costs. In the US, storage and solar projects relying on Chinese equipment will likely see about a 9% cost increase in Q4. Analysts expect inverters to lose their export rebate soon, too, adding more upward pressure.

Will solar prices rise 9% in Q4 2025?

Subscribe to Electrek on YouTube for exclusive videos and subscribe to the podcast. Solar and storage prices will rise 9% in Q4 2025 as China cuts production and ends export tax rebates, Wood Mackenzie says.

The analysis reveals that three converging factors -- polysilicon consolidation, supply-side production cuts, and the cancellation of China's 13% VAT export rebate -- will ...

Are you considering solar battery storage but unsure where to start? Comparing the top factories in China is crucial for making an informed choice.

China storage solar power wholesale - Select 2025 high quality storage solar power products in best price from certified Chinese manufacturers, suppliers, wholesalers and factory on Made-in ...

Find high-quality solar power and storage solutions from reliable manufacturers in China. Build long-term relationships with us for the best prices and superior products in the industry.

Bottom line is, ultra-cheap solar and storage gear is on its way out. The next phase of the energy transition will
