How do I know if my phone is compatible with Suriname?

You can also find out if your mobile phone is compatible with the frequency bands that are used in Suriname, or with the mobile phone operator you are going to use in Suriname. Kimovil Frequency Checker can help you solve these questions by simply indicating which is the phone you want to consult.

Can you measure a base station if you're in a 3G network?

You can only measure stations in the network you are actively connected to, so for instance you can't locate a 4G base station if you are in a 3G network. Usually 2G/3G/4G/4G+cells can all be in the same base station, and even be sent from the same panel antenna.

How many kilometers can a base station cover?

The application can show that a base station can cover areas up to a hundred kilometers. These errors can be created if the network data collected by the application has great resemblance with some other base station or if the phone has calculated incorrect GPS-data.

How to find a base station?

Base station location in urban areas is best determined by doing round trips of city blocks. At more rural locations you should do larger sweeps to save time. You will get the best result on flat ground. Ensure that you have a sufficiently good connection to the base station as well as a GPS connection.

As of January 2024, about 75.8% of Suriname's population were online, roughly 474,000 people, with about 24% remaining offline.

4G is the fourth generation of mobile phone communications standards. It is a successor of the 3G and provides ultra-broadband internet access for mobile devices. The high data transfer ...
