The definition of a battery is a device that generates electricity via reduction-oxidation (redox) reaction and also stores chemical energy (Blanc et al., 2010). This stored ...

Redox flow batteries (RFBs) store energy in two tanks that are separated from the cell stack (which converts chemical energy to electrical energy, or vice versa).

The battery uses vanadium's ability to exist in a solution in four different oxidation states to make a battery with a single electroactive element instead of two.
