Are lithium batteries supercapacitors a thing?

If you have a hybrid vehicle, and it requires lithium-ion batteries, you can go for lithium-ion capacitors. Yes, they are a thing and they are a combination of the best of both worlds. Other than that, you cannot replace your batteries with a capacitor, no matter even if it is a super cap. Are lithium batteries supercapacitors? No.

How much does a supercapacitor cost per kWh?

While lithium-ion batteries dominate headlines, supercapacitor cost per kWh has emerged as a critical metric for industries demanding rapid charge-discharge cycles and extreme durability. In 2023, the average supercapacitor energy storage system ranged between \$3,000-\$5,000 per kWh - significantly higher than traditional batteries.

How much does a supercapacitor energy storage system cost?

In 2023, the average supercapacitor energy storage system ranged between \$3,000-\$5,000 per kWh - significantly higher than traditional batteries. But why does this gap exist, and when will it close? Unlike batteries that rely on chemical reactions, supercapacitors store energy electrostatically.

How much does a lithium-ion battery cost?

Yet, installation complexity keeps system-level expenses high - a paradox the industry is racing to solve. At \$150-\$200 per kWh, lithium-ion seems unbeatable. But consider this: A Shanghai metro line using supercapacitors achieved 10 million charge cycles with zero degradation, while battery-based systems required replacements every 3-5 years.
