From iron-air batteries to molten salt storage, a new wave of energy storage innovation is unlocking long-duration, low-cost resilience for tomorrow's grid.

Latest news on energy storage projects, BESS, capacity expansion, and regulatory updates across Europe, US & Canada, Latin America, and Asia Pacific. Discover how energy ...

This report summarizes four recent pilot projects, highlighting their technological processes, performance and cost metrics, and potential viability as demonstrated through field work of ...

From just under 0.5 terawatts (TW) in 2024, total capacity is expected to rise ninefold to over 4 TW by 2040, driven by battery energy storage systems (BESS). Last year ...

The project will be delivered in stages, with initial construction expected to begin in late 2026 and full buildout of solar and battery facilities planned for 2027 and 2028. Officials at ...

Today, the U.S. Department of Energy released its draft Energy Storage Strategy and Roadmap.

This report summarizes four recent pilot projects, highlighting their technological processes, performance and cost metrics, and potential ...

Recently, the progress of 4 energy storage capacity and production projects has been updated.

Global demand for energy storage is surging. Lithium-ion leads today, but new contenders like sodium-ion, flow, and gravity systems are shaping the future grid.

In this Energy-Storage.news roundup, Hydrostor receives permitting approval for its California project, Hawaiian Electric is set to begin construction on a Maui battery energy storage system ...
