What is Onsite Energy?

Onsite energy refers to electric and thermal energy generation and storage technologies that are physically located at a facility and provide alternative energy services directly to the site.

How much does solar energy cost in India?

A recent cost-benefit study provides tangible figures: Levelised Cost of Solar Energy (LCOE) in India now averages INR3.2 - INR4.1 /kWh versus INR7 - INR9 /kWh retail grid tariffs. Capex breakdown: 45 % PV array, 30 % batteries, 15 % inverter & EVSE, 10 % civil & soft costs.

What is levelised cost of solar energy (LCOE) in India?

Levelised Cost of Solar Energy (LCOE) in India now averages INR3.2 - INR4.1 /kWh versus INR7 - INR9 /kWh retail grid tariffs. Capex breakdown: 45 % PV array, 30 % batteries, 15 % inverter & EVSE, 10 % civil & soft costs. Payback period: 4-6 years for high-utilisation sites (≥ 10 charges /day), extending to 7-9 years where traffic is lighter.

Can a rooftop PV system charge a passenger EV overnight?

Yes. A 5 kW rooftop PV array paired with a 10 kWh battery and a 7 kW AC charger can fully charge most passenger EVs overnight without importing grid power. How long does installation take? Fixed stations need 6-10 weeks for permitting, civil works and commissioning; mobile containerised units can be operational within a fortnight.
