The Sun's magnetic field goes through a cycle, called the solar cycle. Every 11 years or so, the Sun's magnetic field completely flips. This means that the Sun's north and ...

When you think of a day, you normally think of one cycle of daytime to nighttime. That is called a solar day. On Earth, a solar day is around 24 hours. However, Earth's orbit is ...

Solar cycle, period of about 11 years in which fluctuations in the number ...

The observed and predicted Solar Cycle is depicted in Sunspot Number in the top graph and F10.7cm Radio Flux in the bottom graph. The predicted progression for the current ...

Solar System Hello, Pluto! In July of 2015, a spacecraft named New Horizons arrived at Pluto after a long journey. It took amazing pictures of this dwarf planet and will ...

Most solar researchers agree that the solar dynamo is located in the convection zone or in the interface layer between the convection zone ...

This is called the solar cycle. The Sun has been getting slowly brighter since it was born. A couple of billions of years ago, the Sun was a little dimmer than it is now. The Sun ...

You probably know that a year is 365 days here on Earth. But did you know that on Mercury you'd have a birthday every 88 days? Read this article to find out how long it takes ...

The solar cycle describes an 11-year period of solar activity driven by the sun's magnetic field and indicated by the number of ...

The amount of solar activity changes with the stages in the solar cycle. Solar activity can have effects here on Earth, so scientists closely monitor solar activity every day.
