At least 13 member states hit monthly solar power records, including the Netherlands (40.5 per cent) and Greece (35.1 per cent), ...

As solar PV deployment ramps up across the EU, it's not just about harnessing clean energy - it's also about powering job growth. The expansion of solar installations creates a ripple effect, ...

The report underscores solar's increasing role in securing energy independence and meeting climate targets. Germany, Spain, and Italy continue to lead the charge, but ...

The report underscores solar's increasing role in securing energy independence and meeting climate targets. Germany, Spain, and ...

Solar power consists of photovoltaics (PV) and solar thermal energy in the European Union (EU). Solar power is growing in every EU country.

Solar is set to become the largest green energy source globally, the question now for Europe is whether it can revamp its grid fast enough to prevent another dramatic blackout.

Many European countries generated record levels of solar power in the first half of 2025, according to figures presented by the Fraunhofer Institute for Solar Energy Systems (ISE).

In the first half of 2025, Germany and many other European countries generated more solar power than ever before. This was offset by lower electricity generation from wind ...

Solar broke another historical record in power generation this March for the third consecutive month, making up more than 10% of Europe's electricity mix - shows Eurelectric ...

Many European countries generated record levels of solar power in the first half of 2025, according to figures presented by the ...
