What is a supercapacitor energy storage system?

A supercapacitor is an energy storage system that can charge faster than traditional batteries. They are also lighter, less toxic, and more cost-effective than chemical batteries, making them a popular energy storage system.

Why do supercapacitors need a system supplier?

System suppliers integrate algorithms that shift power between supercapacitors and batteries to match route topography, which lowers total cost of ownership. As electric-bus procurements rise, this capability strengthens the competitive position of the supercapacitors market in mass-transit electrification.
