With its hydroelectric power plants in the Alps and innovative projects, Switzerland is contributing to the search for solutions for the efficient, long-term storage of electricity.

Based on current scientific knowledge, leading Swiss researchers consider that where large amounts of energy need to be stored for the medium to long-term, technologies ...

Utility EWS AG and developer MW Storage have completed the expansion of a battery energy storage system (BESS) project in Switzerland from 20MW to 28MW, making it ...

With 75% of its electricity already from renewables*, the Swiss now face a "good problem": how to store all that clean energy when the Alps aren't windy and Lake Geneva isn't ...

"This project helps to stabilize the electricity grid in Switzerland and to optimize the management of our own energy and power capacity in Wettingen."

This ambitious initiative not only represents a record-breaking flow battery (redox) energy storage system but also signifies a pivotal shift in Europe's energy landscape.

It ensures maximum energy efficiency by optimizing solar power generation, energy storage, and usage. The system guarantees a reliable power supply during peak times and nighttime, ...

Battery storage systems are crucial for the energy transition. Find out how Swissgrid is driving forward their integration into the grid.

Well, they're now making waves in energy storage. The Federal Council just launched Europe's most ambitious battery storage tender - a 900 MW capacity push to solve their Alpine energy ...

Energy storage is rapidly become more and more relevant due to the increasing renewable energy fraction in the grid, the rise of photovoltaics and the increase in electric cars.

Swiss Power Storage
