panel rows should be around five to six inches, but it is also recommended that you leave one to three feet of space between every second or third row. This is because maintenance workers need enough room to get on the roof and make repairs whenever necessary. See more on solvoltaics goenglish.cc The gap between the container and the solar panel is too big ... The gap between the last row of solar panels and the roof's edge should be a minimum of 12 inches or one foot. This ensures the panels are accommodated as they expand

Yes - you do want a gap between module rows. In this scenario where there is no 3rd row above it isn't as important, but thermal expansion is a real thing and giving the modules space to ...
