Why is Delhi the only state to shut down thermal power plants?

Delhi is also the only state to shut down all its thermal power plants and shift its industry to clean fuels. According to an IEEFA report, Delhi has just 9% of renewables in the power mix, with a huge percentage of renewable energy potential still being untapped (86%).

How will Delhi's new solar system affect electricity costs?

In April 2025, the Delhi assembly introduced a plan to install a 500 kW rooftop solar system within 100 days. Currently, the assembly has two 100 kW solar plants. The proposed expansion is expected to cut electricity costs by approximately Rs 1.5 million per month.

How is Delhi transforming waste heaps into usable power?

To address this challenge, the Delhi government is actively developing WtE infrastructure aimed at converting the city's towering waste heaps into usable power.

This paper aims to present a comprehensive review of the impact of the existing individual wind and solar energy policies along with the recently declared hybrid policy in India ...

Even if we sized wind and solar to provide enough power annually, the majority of time periods would either have large deficits or surpluses. An obvious solution to renewable variability and to...

While Delhi has taken some steps towards a clean electricity transition, there is no doubt that the state lags in several areas. Setting ambitious targets for renewable energy ...

Even if we sized wind and solar to provide enough power annually, the majority of time periods would either have large deficits or surpluses. An ...

Both solar energy and wind energy will spearhead global efforts towards cleaner and sustainable energy production. If technology advances and continues to grow at the same ...

Hybrid systems are expected to become increasingly cost competitive, driven by reducing costs of battery storage and solar energy. An optimal combination of solar, wind and ...
