What is an uninterruptible power supply?

An uninterruptible power supply or a UPS system is an electrical apparatus that provides emergency power to a load when the input power source or mains power fails.

Can Puls power an uninterruptible power supply?

Currently, PULS offers two options for an uninterruptible power supply to the load in an emergency: both double-layer capacitors and lead-acid batteries can serve as energy storage in DC-UPS systems for industrial applications.

Why are network operators obligated to ensure a stable and reliable power supply?

Network operators are obligated to ensure a stable and reliable power supply. The grid must adapt to the increasingly flexible energy flow. Uneven consumption situations and generation, higher loads, and the feed-in of decentralised electricity cause voltage fluctuations. Peak loads with unknown simultaneity factors pose a significant challenge.
